

Application Performance Testing

Identify issues before they impact your application.

Checkpoint Technologies offers unparalleled expertise in quality assurance and software testing to ensure our clients maximize the value of IT in their business.

Automated Functional Testing

Accelerate your test automation plans

Leveraging Micro Focus Unified Functional Testing or Selenium, Checkpoint Technologies can provide cost-effective automation solutions to organizations of any size.

Application Security Testing

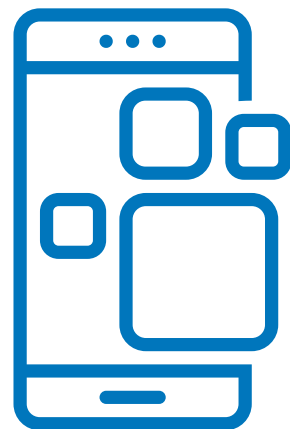

Detect a greater amount of vulnerabilities

Implementation of Micro Focus Fortify allows the automation of all aspects of a Software Security Assurance (SSA) protocol. This reduces the time to find and fix vulnerabilities and leads to cut costs to development and shorter time to market.

Mobile Application Testing

By leveraging industry-standard Micro Focus LoadRunner software with Micro Focus Shunra Network Virtualization software, Checkpoint Technologies offers performance testing solutions that can accurately exercise load on your system to ensure it is ready for prime time.

Test Management Solution

Taking advantage of this centralized single source, allows businesses to efficiently manage multiple SDLC application development efforts through the entire development lifecycle, from application design through product release.
